Scenarios

Scenario 1 - Coordinator

Diego has to accept or modify the readers wish students and assign an opponent for each student. He will set up a deadline for the feedback answers from readers, opponents and supervisors. He will wait until the final submission feedback deadline is reached to grade the student thesis.

Scenario 2 - Supervisor

SHE is a supervisor. After logging in, she would see a list of supervision requests, a list of project plans needed to be confirmed and a list of preliminary reports to be assessed. When she receives a supervision request from a student accompanied by a project plan, she can either accept or deny it. If accepted, she submits her feedback on the project plan to the system, so that the coordinator evaluate the project plan. When she receives a "pass" evaluation from the coordinator on a project plan, she confirms the project plan so that the student can start working on the thesis. Once one of her students submit a preliminary report, she submits her assessment on the report to the system.

Scenario 3 - Reader

He is a reader. When logged in, he can see a list of preliminary reports, a list of preliminary reports assigned to him for feedback and a list of final reports assigned to him for final evaluation. He can bid for as many of preliminary reports as he wants to be assigned to him. After receiving confirmation for any bid, he must submit his feedback on the report to the system. After receiving any final report, he must submit his evaluation on it before the deadline.

Scenario 4 - Reader

A reader can log in into the system and see a list of students waiting for feedback. The reader may pick a set of students to read. The reader may give feedback about the report before the evaluation deadline. The reader will wait until the student makes changes and submit the final report, he will give final feedback to the coordinator.

Scenario 5 - Opponent

An opponent can log in into the system. She would see a list of preliminary reports assigned to her by the coordinator. She needs to submit her feedback on them before the deadline.

Scenario 6 - Student

Mirko submits the report before the deadline. He has to wait a few weeks until getting feedback from his supervisor, readers and opponent. After the feedback, he can change his report and submit a final report before the final deadline. After a few weeks, he will receive his grade for the thesis.
